

INSTALLING A FASTRAK® TRANSPONDER

The 15 Express Lanes requires all users to have a transponder mounted according to these instructions.

It's recommended that each vehicle have a sticker transponder installed, even if you use a FasTrak Flex® switchable transponder for carpooling.

Interior Mounted Transponder Installation

- Step 1.** Clean mounting area inside of windshield and let dry.
- Step 2.** Peel backing and affix to inside windshield, smoothing the sticker flat or pressing the switchable transponder strips' adhesive firmly against the glass.

Interior Sticker Transponder

Switchable Transponder

Place the switchable transponder 2" from the side and bottom of the lower left of the windshield.

Place the sticker transponder 2" to 4" from the top of the windshield behind the rearview mirror.

Exterior Sticker Transponder Installation

Exterior stickers should be used on motorcycles and vehicles with metal oxide windshields.

- Step 1.** Clean the mounting area on the driver's side headlight and let dry. For motorcycles, position in the center of the main headlight.
- Step 2.** Carefully remove the transponder sticker by peeling the backing down. Install only the top strip onto the headlight. Minimize contact with the adhesive, and avoid sharply bending or folding the transponder.

- Step 3.** Affix the transponder sticker to the headlight and press smoothly against the surface, working from one end to avoid trapping air bubbles.

CAUTION: Do not relocate a sticker transponder once it has been installed. It will break and become unusable.

Place sticker over the driver's side headlight 2" from any metal.

Place sticker in the center of the headlight.
